Download

nOpen the Setup .nClose the Uninstall .nTurn off your Computer or Laptop.nRestart it again and do not allow it to start.nDownload IObit Uninstaller .nUninstall the Previous Version .nNow download the IObit Uninstaller .nRun the file (uninstaller.exe) .nNow Click on Finish .nOpen it (IObit Uninstaller) .nAfter scan, uninstall the Adobe.nNow Enjoy the new version of Adobe CS6.Krebs on Security In-depth security news and investigation Posts Tagged: payload Update 7/3: A malicious movie trailer is circulating on various social media sites. Some versions of the movie have apparently been posted on YouTube. The malicious version of the trailer uses a slow-loading Windows executable. This Windows executable loads a native shellcode that ultimately downloads and executes a malicious payload. It looks like the malware authors are also posting the movie on social media sites (Facebook, Twitter, IMDB) and the YouTube videos are embedded in comments on Twitter posts, indicating that the YouTube user has been tricked into posting the malicious file. Update: Two anonymous tipsters contacted KrebsOnSecurity this week with some very interesting information. In an online forum devoted to file hosting, tipsters told me that a malware distribution project they were working on had been compromised by a post on the forum. The tipsters and others had reported various malicious samples on their forums, as the goal of the project was to identify as many different kinds of malicious code as possible. Malware authors use specific custom code and libraries that help them distribute malicious code efficiently. Within these projects, malicious samples are usually classified and named by their creators, but that custom code often helps other authors distribute the malicious code to additional malware authors. I've been told that the project that was compromised had been compromised by a malware author who was trying to gain attention and help the project by sending in a bunch of samples. I've also been told that the malware author distributed the samples to a post on a file hosting forum where the malware author hosted the samples and discussed the development of the project. As a result, this malware project has become a collection of a bunch of different types of malicious code, most of them signed with the same self-signed certificate. The author also tried to hide the fact that the samples 82157476af
